

DCSC 1:1 Initiative

Technology integration is an important part of education at Danville Community School Corporation. The Technology Department, therefore, has implemented different technologies in the buildings throughout the corporation to meet the needs of our students and teachers.

At Danville Community High School, we are a true 1:1 environment. One device is provided to each student. The device here is a HP Stream laptop. Each of these devices is loaded with Windows 10 and has the ability to connect to the Internet at school, home, and wherever there is WiFi. The HP Stream has become an integral part of education at Danville Community High School. We have a Student Support Center located in the building to provide help with troubleshooting, device malfunctions, and accidental damage. The Student Support Center is run by a member of the Technology Department and has set hours each school day.

Danville Community Middle School and North Elementary have classroom sets of Apple iPad 2's. These iPads are housed in each classroom and do not go home with students. These iPads are loaded with different applications based on the different needs of each grade levels and teachers in their own classrooms. The Technology Department has the ability to provide these different applications to each iPad. This makes the iPads a tailored learning experience in each classroom.
